It made my life so easy when I switched machines. I needed to transfer my files to my new Mac. I used AweClone and it took a couple of minutes to set up. I was ready to go and I had my files. I am already using it to make backups and make copies. While I am unsure about all that AweClone can do, it seems like it has a solid user interface. A lot of the options are hidden but, when you find them, you quickly discover that the user interface is very helpful. It's a matter of trying out different scenarios and seeing how it works for you. As far as the limitations go, I would really like to see a better way to edit the boot loader. I understand that AweClone is focused on data migration, but it might be helpful to be able to update the boot loader as well. Very powerful. I used the New Free Copy of Microsoft Office 2010 for a couple of weeks before I realized I was waiting for the deadline to expire. I needed a new copy of Office because the upgrade was not working with my existing copy. This was too painful, so I used AweClone. It worked perfectly! The transfer is super fast and seamless, and there were no problems when I opened the files on the new computer. I am now using the newest version of Office 2010 and it is working great. I would definitely recommend it. First and foremost, the interface is great and easy to follow. I'm not an expert and needed to refer to AweClone's Help file quite a bit. There is a Help file in the program that includes useful information in a very nice looking format. This was a big plus for me. I have not run into any issues that would necessitate a bug report. I am unsure of whether that is a good thing. It may be better to be notified of any issues that may crop up so that you can solve them before they become a problem. I would recommend AweClone to anyone who is looking for a free solution to their data migration problem. One of the coolest

System Requirements:

It has been brought to my attention that there are some issues with the.exe files for the V2 Release. I've sent a message to ModSpace regarding that. I should have the new V3 Release by the end of this week. I will then update my current downloads section with a link to the V3 Release. This is the second version of the mod for a wide variety of reasons. The main one being that I've decided to release the mod under a new license - the very same one that was released as a part of the Fallout:
